2.3.1 Inflation Rate	13
2.3.2 Growth Domestic Product (GDP)	14

ABSTRACT

Many scientists in developed countries have examined the significance relationship of export goods to macroeconomics. However, few studies in developing nations have investigated this proposal. In this research, panel data from year 2010 until 2018 were collected annually to analyse and investigate the relationship between the Export Goods and the macroeconomic variables (Gross Domestic Product, Inflation Rate, Interest Rate, Foreign Exchange Rate and Population Growth) among five (5) Asian countries which is Malaysia, India, Philippine, Singapore and Thailand. This study's aim is to analyse the effect of these factors on all five (5) Asian countries' export goods. After conducting a Pool OLS Model, it can be concluded that Gross Domestic Product, Interest Rate and Foreign Exchange Rate have a positive relationship with export goods while Population Growth and Inflation Rate shows conversely relationship with export goods.
